

# Clear Two Step Footstool

## Product Advantages

Ideal for lateral and AP weight bearing exams

3 separate slot positions for image receptor

Safety handles for patient support

Durable, non-slip surfaces

16 in. high platform

Can accommodate a 17 x 17 in. cassette size imaging receptor or smaller

Tilt-back casters for easy mobility

Rated up to 500lb.

The **Clear Two Step Footstool** allows the radiographer to perform weight bearing foot and ankle studies safely with ease. Most x-ray systems do not allow the user to bring the tube head focal spot low enough to be positioned perpendicular to the anatomy of interest. The **Clear Two Step** raises the patient to 16in above floor-level so any x-ray system can effectively deliver proper images. It features dual patient support handles, easy to clean surfaces and tip-back casters for effortless placement and storage. Rated up to 500lb of direct patient weight, it has a slot underneath the top platform for AP images and two additional slots for positioning the IR during lateral exams.

**Reina Imaging** CE
